

WHY IT'S TIME TO OPTIMIZE YOUR SECURITY PLATFORM

As thoughts of being the next "headline" permeate throughout organizations, it's impossible to think you're 100% protected. With security becoming top-of-mind from management all the way to the boardroom, are you sure you're making the appropriate investments in your security platform instead of the next coolest thing?

Today's risks will drive a \$10B Cyber Insurance market by 2020²

"It can be a nightmare to glean meaningful security information from a hodgepodge of older, non-integrated systems."

-TechTarget

TODAY'S THREAT LANDSCAPE IS HIGHLY ADVANCED

To begin, it is important to discuss how the threat landscape continues to be more and more difficult to manage.

THE CYBERATTACK SURFACE IS GROWING:

It's become tough to properly secure, especially with IoT, mobile workers, and 3rd party vendors¹

FILELESS ATTACKS:

Although malware is growing, there is a shift occurring towards difficult-to-detect attacks, even some that don't use files¹

THREATS WILL ALWAYS EVOLVE:

Cybercrime and cybercriminals will continue to evolve, looking for the easiest way to steal something of value¹

The average cost of a data breach is 3.79M

THIS CREATES MANY CHALLENGES FOR ORGANIZATIONS

Having Enough Resources to Scale

Prioritizing Resources

Keeping Pace with Competition

Compliance

The mean time to identify a security breach is 206 days³

MOVE PAST THE "TRADITIONAL APPROACH" TO SECURITY

In today's threat landscape, a siloed approach to security is not an effective long-term strategy.

THE TRADITIONAL, SILOED APPROACH:

Traditionally, organizations acquired technology in silos to solve the tactical needs of the day.

- Highly unsustainable
- Strenuous on limited budgets
- Leaves the security environment susceptible to failure

AN INTEGRATED, OPTIMIZED SECURITY PLATFORM:

Today, you must invest in easier to manage, high-value protection where security can keep pace with a changing threat landscape.

- Actively improves security posture
- Delivers operationally effective security
- Delivers an improved security effort to outcome ratio
- Provides end-to-end visibility for faster resolution

By investing in an optimized security platform, you can protect your assets, customer information, and reputation as the threat landscape evolves.

HOW CAN DG TECHNOLOGY HELP?

By combining best-of-breed technology with our insight, services, and expertise, we provide a unique perspective on Security.

Consulting and Professional Services:

- Security Health Checks and Audits
- Risk and Compliance Assessment
- Penetration Testing

Strategic Security Partnerships:

- Ability to create a strong security foundation
- Ability to align your specific risks to the right solution
- Intel Security Platinum Partner

Proprietary Software:

- MEAS—Mainframe Event Acquisition System
- Help collect, in real-time, information pertaining to security events

OUR SERVICES AND SOLUTIONS HELP YOU:

ENABLE YOUR RESOURCES TO FOCUS ON CORE TASKS

GAIN A BROAD PERSPECTIVE ON SECURITY

DRIVE AN ROI WHEN INVESTING IN SECURITY

LET'S START A CONVERSATION

With the only constant in cybersecurity being change, there has never been a better time to think about your security than right now. Reach out to us today, let's discuss your security challenges, and how we can help you overcome them.
