

FORTINET CYBER THREAT ASSESSMENT

KNOW YOUR VULNERABILITIES & LEARN THE TRUTH ABOUT YOUR NETWORK SECURITY

Secure network architectures need to constantly evolve to keep up with the latest advanced persistent threats. There are two ways to find out if your solution isn't keeping up—wait for a breach to happen or run validation tests.

DG Technology has partnered with Fortinet to offer a Cyber Threat Assessment. Using Fortinet's FortiGate to monitor key indicators within your network, a Fortinet expert will validate your entire network's current security accuracy, application usage, and performance...all with no interruption to your infrastructure and at no cost to you.

A FORTINET CYBER THREAT ASSESSMENT CAN HELP YOU BETTER UNDERSTAND:

SECURITY & THREAT PREVENTION

Is your current network security solution effective?

Determine your security breach probability by identifying & detecting:

- + Application vulnerabilities
- + Malware/ botnets
- + Phishing attacks
- + "At risk" devices

USER PRODUCTIVITY

Are user application usage and browsing habits exposing your company to undue liability and potential damages?

Achieve application visibility to identify:

- + Peer-to-peer, social media, instant messaging, and other apps running on your network
- + Spam, newsletters or adult content bothering your email

UTILIZATION & PERFORMANCE

Is your network security solution optimized for performance?

Determine your throughput, session, and bandwidth usage requirements during peak hours for your:

- + Network
- + Email system
- + Critical applications

Obtaining a Cyber Threat Assessment Report will give you unmatched insight into your current security posture and network activity.
