

Cost-effective, managed approach to protect and update your devices.

Our multi-vendor patch management tool with focused staff and proven processes, deploy critical patches on your devices, ensuring compliance and protection against attacks that target these vulnerabilities. We manage the deployment and installation of security patches so that you can focus on more important business objectives.

Program Details/Deliverables:

- ✓ Spend less time managing patches and more time running your business
- ✓ Increase security and compliance by ensuring that devices are patched reliably every month
- ✓ Reduce time to deploy and install patches with configurable reboot schedules
- ✓ Conserve bandwidth consumption with our optimized patch management architecture

60% of breaches in 2019 involved unpatched vulnerabilities

Costs and Consequences of Gaps in Vulnerability Response, Service Now/Ponemon Institute 2019

102 days is the average time to patch known vulnerabilities.

The 2018 State of Endpoint Security Risk, Ponemon Institute

EFFICIENT DEPLOYMENT IN ANY LOCATION

- ▶ Our service features an agent-based approach that allows for on or off network patching without the complex infrastructure requirements of other solutions. With any system that runs our agent, which downloads from Patch cache, network bandwidth is optimized. Devices that are roaming off of the corporate network can download and install patches from our cloud based server.

CENTRALIZED MANAGEMENT AND REPORTING

- ▶ We manage the patch configuration for your entire organization from one spot, with profiles available to meet differing compatibility needs. The reporting console includes reports to show you the current patch levels of devices, and give you visibility into what patch related activities have been performed, while real-time patch monitoring provides deep insight into approved, unapproved, pending, and failed patching efforts.

NOT JUST WINDOWS

- ▶ We manage patching of the most common third party applications in addition to standard Microsoft® and Windows® patches. Our single pane of glass console provides a view of all patch statuses.
